

API Documentation

Updates

Get updates list

Get a list of all updates

Method: GET

Endpoint: /v1/updates

[Try it]

Request Example

```
curl --request GET \
  --url
'https://api.mod0.link/canton-mainnet/v1/updates?sortBy=AGE&size=20&orderBy=DESC'(https:
//api.mod0.link/canton-mainnet/v1/updates?sortBy=AGE&size=20&orderBy=DESC)' \
  --header 'x-api-key: <api-key>'
```

Response Example (200 OK)

```
{
  "content": [
    {
      "updateId": "<string>",
      "migrationId": 123,
      "workflowId": "<string>",
      "recordTime": 123,
      "synchronizerId": "<string>",
      "effectiveAt": 123,
      "rootEventIds": "<string>",
      "eventsCount": 123,
      "synchronizerName": "<string>",
      "synchronizerImg": "<string>"
    }
  ],
  "pageable": {
    "sort": {
      "sorted": true,
      "empty": true,
```

```

    "unsorted": true
  },
  "pageSize": 123,
  "pageNumber": 123,
  "offset": 123,
  "paged": true,
  "unpaged": true
},
"last": true,
"totalPages": 123,
"totalElements": 123,
"totalCount": 123,
"size": 123,
"number": 123,
"sort": {
  "sorted": true,
  "empty": true,
  "unsorted": true
},
"first": true,
"numberOfElements": 123,
"empty": true
}

```

Authorizations

- **x-api-key**: string [header] **required**

Query Parameters

- **sortBy**: enum<string> [default: AGE] **required**
 - Sorting parameter. Available options: AGE
- **page**: integer<int32> [default: 0] **required**
 - Queried API page. Required range: 0 <= x <= 50
- **size**: integer<int32> [default: 20] **required**
 - Number of queried entries. Required range: 1 <= x <= 100
- **orderBy**: enum<string> [default: DESC] **required**
 - Sorting method: from the lowest element to the highest (ASC) or from the highest element to the lowest (DESC). Available options: ASC, DESC

Response Structure (200 - / OK)

- **content:** object[] (*Show child attributes*)
- **pageable:** object (*Show child attributes*)
- **last:** boolean
- **totalPages:** integer<int64>
- **totalElements:** integer<int64>
- **totalCount:** integer<int64>
- **size:** integer<int32>
- **number:** integer<int32>
- **sort:** object (*Show child attributes*)
- **first:** boolean
- **numberOfElements:** integer<int32>
- **empty:** boolean

Get raw update details

Get details of updates in a raw JSON format by update ID

Method: GET

Endpoint: /v1/updates/{updateId}/raw-details

[Try it]

Request Example

```
curl --request GET \
  --url
[https://api.mod0.link/canton-mainnet/v1/updates/](https://api.mod0.link/canton-mainnet/v1/upd
ates/){updateId}/raw-details \
  --header 'x-api-key: <api-key>'
```

Response Example (200 OK)

```
{}
```
