

API Documentation

Events

Get events list

Retrieve paginated list of events

Method: GET

Endpoint: /v1/events

[Try it]

Request Example

```
curl --request GET \
  --url
'https://api.moda.link/canton-mainnet/v1/events?sortBy=AGE&size=20&orderBy=DESC'(https://
api.moda.link/canton-mainnet/v1/events?sortBy=AGE&size=20&orderBy=DESC)' \
  --header 'x-api-key: <api-key>'
```

Response Example (200 OK)

```
{
  "content": [
    {
      "id": 123,
      "eventId": "<string>",
      "transactionId": "<string>",
      "eventType": "<string>",
      "contractId": "<string>",
      "templateId": "<string>",
      "packageName": "<string>",
      "templateName": "<string>",
      "templateHash": "<string>",
      "eventData": "<string>",
      "createArguments": "<string>",
      "createdAt": 123,
      "signatories": "<string>",
      "observers": "<string>",
      "choice": "<string>",
      "choiceArgument": "<string>",
```

```

    "childEventIds": "<string>",
    "exerciseResult": "<string>",
    "consuming": true,
    "actingParties": "<string>",
    "interfaceId": "<string>"
  }
],
"pageable": {
  "sort": {
    "sorted": true,
    "empty": true,
    "unsorted": true
  },
  "pageSize": 123,
  "pageNumber": 123,
  "offset": 123,
  "paged": true,
  "unpaged": true
},
"last": true,
"totalPages": 123,
"totalElements": 123,
"totalCount": 123,
"size": 123,
"number": 123,
"sort": {
  "sorted": true,
  "empty": true,
  "unsorted": true
},
"first": true,
"numberOfElements": 123,
"empty": true
}

```

Authorizations

- **x-api-key:** string [header] **required**

Query Parameters

- **sortBy:** enum [default: AGE] **required**
 - Sorting parameter. Available options: AGE
- **page:** integer [default: 0] **required**
 - Queried API page. Required range: $0 \leq x \leq 50$
- **size:** integer [default: 20] **required**
 - Number of queried entries. Required range: $1 \leq x \leq 100$
- **orderBy:** enum [default: DESC] **required**
 - Sorting method: from the lowest element to the highest (ASC) or from the highest element to the lowest (DESC). Available options: ASC, DESC

Response Structure (200 - / OK)

- **content:** object[] (*Show child attributes*)
- **pageable:** object (*Show child attributes*)
- **last:** boolean
- **totalPages:** integer
- **totalElements:** integer
- **totalCount:** integer
- **size:** integer
- **number:** integer
- **sort:** object (*Show child attributes*)
- **first:** boolean
- **numberOfElements:** integer
- **empty:** boolean

Get event details

Retrieve detailed information about a specific event

Method: GET

Endpoint: /v1/events/{eventId}

[Try it]

Request Example

```
curl --request GET \
  --url
[https://api.mod0.link/canton-mainnet/v1/events/](https://api.mod0.link/canton-mainnet/v1/event
s/){eventId} \
  --header 'x-api-key: <api-key>'
```

Response Example (200 OK)

```
{
  "eventId": "<string>",
  "transactionId": "<string>",
  "eventType": "<string>",
  "contractId": "<string>",
  "templateId": "<string>",
  "packageName": "<string>",
  "templateName": "<string>",
  "templateHash": "<string>",
  "eventData": "<string>",
  "createArguments": "<string>",
  "createdAt": 123,
  "signatories": "<string>",
  "observers": "<string>",
  "choice": "<string>",
  "choiceArgument": "<string>",
  "childEventIds": "<string>",
  "exerciseResult": "<string>",
  "consuming": true,
  "actingParties": "<string>",
  "interfaceId": "<string>"
}
```

Authorizations

- **x-api-key**: string [header] **required**

Path Parameters

- **eventId**: string **required**
 - Event ID

Response Structure (200 - / OK)

- **eventId**: string
- **transactionId**: string
- **eventType**: string

- **contractId**: string
- **templateId**: string
- **packageName**: string
- **templateName**: string
- **templateHash**: string
- **eventData**: string
- **createArguments**: string
- **createdAt**: integer
- **signatories**: string
- **observers**: string
- **choice**: string
- **choiceArgument**: string
- **childEventIds**: string
- **exerciseResult**: string
- **consuming**: boolean
- **actingParties**: string
- **interfaceId**: string

Featured Apps

Get featured apps list

Retrieve paginated list of featured applications

Method: GET

Endpoint: /v1/featured-apps

[Try it]

Request Example

```
curl --request GET \
  --url
'https://api.modo.link/canton-mainnet/v1/featured-apps?page=0&size=20'(https://api.modo.link
/canton-mainnet/v1/featured-apps?page=0&size=20)' \
  --header 'x-api-key: <api-key>'
```

Response Example (200 OK)

```
{
  "content": [
    {
      "contractId": "<string>",
      "templateId": "<string>",
```

```

    "dso": "<string>",
    "provider": "<string>",
    "createdEventBlob": "<string>",
    "createdAt": 123
  }
],
"pageable": {
  "sort": {
    "sorted": true,
    "empty": true,
    "unsorted": true
  },
  "pageSize": 123,
  "pageNumber": 123,
  "offset": 123,
  "paged": true,
  "unpaged": true
},
"last": true,
"totalPages": 123,
"totalElements": 123,
"totalCount": 123,
"size": 123,
"number": 123,
"sort": {
  "sorted": true,
  "empty": true,
  "unsorted": true
},
"first": true,
"numberOfElements": 123,
"empty": true
}

```

Get featured app details

Retrieve detailed information about a specific featured app

Method: GET

Endpoint: /v1/featured-apps/{contractId}

[Try it]

Request Example

```
curl --request GET \
  --url
[https://api.mod0.link/canton-mainnet/v1/featured-apps/](https://api.mod0.link/canton-mainnet/
v1/featured-apps/){contractId} \
  --header 'x-api-key: <api-key>'
```

Response Example (200 OK)

```
{
  "contractId": "<string>",
  "templateId": "<string>",
  "dso": "<string>",
```

```
"provider": "<string>",  
"createdEventBlob": "<string>",  
"createdAt": 123  
}
```
